# ecoProgram 2.0

Caring for patients and the planet

At EMD Serono, we are committed to improving lives of patients as well as protecting the planet. With **ecoProgram 2.0's** new puncture proof containers, we are taking a step further to protect health care providers like yourself.

Collaborating with Canada's leading medical waste disposal agency, **ecoProgram** diverts used gonadotropin pens from landfill, and turns them into clean energy through the Waste-to-Energy technology.

Together, we can continue to make a difference.

## The ecoProgram has 3 simple steps:

1

Patients bring used pens back to the clinic (**do not dispose of needles in ecoProgram containers**)

2

Collect capped used pens in desktop ecoProgram container, then into 23L white **ecoProgram Stericycle** pail for pick up.

3

The **ecoProgram Stericycle** pail is picked up by a Stericycle staff and transported to the Waste-to-Energy plant. For your pick up schedule, please consult your Key Account Manager.

To learn more about the EMD Serono ecoProgram, please talk to your key account manager.

**We appreciate your participation in the program.**
